DEVSLOPES   DEVSLOPES MAC APP   DEVSLOPES GAME STUDIO   TALK CODE

Welcome to my World

My best friend

I don't know what it is about cats....but they make anything funny!

Column 2

One time when I was just a wee lad, I kept sticking a stick in a honey beehive that was in my neighbors lawn. After 10 times the bee's got mad....out came the swarm. I've never ran faster. Only 22 bee stings. Not too bad.

Column 3

Ever wonder if the world is flat? When I retire, I'm sneaking into Antartica and hiking to the "edge"...Who's with me?

TIME

TO GET

TRICKY

Exercise: Your first website using CSS!

05 SEPTEMBER 2017 by Jason Brewer

In this exercise you're going to use everything you've learned about rows and columns to structure your own mini website page.

Look at the example above. I wan't you to really look at this and visualize how the rows and columns are being structured to place the content on the page.

For your convenience, here's the row and column classes.

```
.row {
  display: flex;
}

.col-1 {width: 8.33%;}
.col-2 {width: 16.66%;}
.col-3 {width: 25%;}
.col-4 {width: 33.33%;}
.col-5 {width: 41.66%;}
.col-6 {width: 50%;}
.col-7 {width: 58.33%;}
.col-8 {width: 66.66%;}
.col-9 {width: 75%;}
.col-10 {width: 83.33%;}
.col-11 {width: 91.66%;}
.col-12 {width: 100%;}
```

Here's some guidelines:

1. Create **one** rule to center all `<h1>` `<h2>` `<h4>` and `<p>` tags.

2. Color **only** `<h1>` tags.

3. Find an image and resize it if needed so it fits nicely on the page.

4. Add some background colors like the example above.

5. Add a Google font to any text of your choice.

6. Lets get tricky. At the bottom of the page, using `row` and `grid` **classes** – place the text as displayed above.
